Mt. Sinai President Mitchell Balk’s remarks at NFP’s first graduation ceremony and celebration.

What a monumental day this is for Cleveland’s Nurse-Family Partnership! Today is about the moms, dads and babies, but it’s also appropriate to review our history, especially because the two central figures in bringing Nurse-Family Partnership to Cleveland for the very first time are actually in the room today.

Several years ago, I received a call from Mt. Sinai Director Belleruth Naparstek saying that she and Mt. Sinai Founding Board Chair S. Lee Kohrman had read about a prenatal nurse home-visiting program that had lifelong benefits for mom and baby that was backed by thirty years of research. I had known about NFP in the early days of the Foundation but at that time Mt. Sinai didn’t have the resources to establish a program in Cleveland.

My first call after speaking to Belleruth was to the leadership of MetroHealth Medical Center. We approached MetroHealth because of its expertise in maternal/child health, its Level III Perinatal Center and its wonderful name in the community. I asked if MetroHealth would operate the program and they said enthusiastically, “Yes!”

We then went to our sister grantmaking organizations and together we contributed enough start-up money to support the program for its first three years. Then, on a trip to Detroit, where Mt. Sinai and MetroHealth staff “went to school” on the Detroit Nurse-Family Partnership program, we learned that there were federal dollars available to support evidence-based early childhood home visiting that Cleveland and Cuyahoga County had never received.

The federal program was called MIECHV, the Maternal Infant Early Childhood Home Visiting program, part of the 2010 Affordable Care Act. When we returned home from Detroit, I called the State of Ohio Department of Health and said, “We’re bringing Nurse-Family Partnership to Cleveland and we’d like your support to access the federal MIECHV money.”

The State of Ohio responded in the affirmative! So, perhaps $2 million of MIECHV money later, here we are, on solid financial ground, due also in part to FirstYear Cleveland, the City/County public/private infant mortality reduction initiative, and the Ohio Medicaid program. More than anything, we thank our lucky stars every day for our skilled, passionate and devoted nurses and for the leadership of MetroHealth in this and so many other efforts in our community.

Thank you and congratulations graduates!

Graduation Day Ceremony and MetroHealth’s Nurse-Family Partnership Team

ABOUT NURSE-FAMILY PARTNERSHIP—CLEVELAND

Established in Cleveland in 2016 for the first time by the Mt. Sinai Foundation and operated by MetroHealth Medical Center, Nurse-Family Partnership (NFP) is an evidence-based, patient-centric, maternal-child health program for first-time, low-income mothers and their babies. The goal of NFP is to promote the child’s development and to provide support and instructive parenting skills to parents. Women voluntarily enroll as early in their pregnancy as possible and continue with the program through the first two years of the child’s life. Thirty years of national data demonstrate that moms who graduate from the program are 60% more likely to return to work or school after their first pregnancy than their peers who did not participate in NFP, and children who “graduate” are 60% less likely to ever be involved in the juvenile justice or criminal justice systems compared to a control group. The MetroHealth program has surpassed enrollment goals and is now serving over 300 women/families, has welcomed 70 babies and has referred clients to more than 200 health and human services programs.
Senior Transportation Connection (STC) is one of Mt. Sinai’s long-time grantees and one of the Foundation’s signature initiatives in strategic grantmaking. It addresses pressing community health-related needs and promotes effective solutions at scale. Prior to the creation of STC, seniors in Cuyahoga County had consistently ranked transportation as their number one unmet need. Celebrating its 15th anniversary in 2020, STC was incorporated in February 2005 to provide safe, comprehensive, coordinated, efficient, and affordable transportation to seniors in Cuyahoga County. In addition to providing access to health care, fighting isolation, and enhancing quality of life, senior transportation is a key factor in enabling seniors to age in place and remain in their homes and their communities for as long as possible. Since inception, STC has provided over 1,000,000 trips to senior and disabled adults across 27 local municipalities.

Mt. Sinai has figured very prominently in the planning, establishment, and ongoing operation of STC. Mt. Sinai support, both in terms of grant dollars and thought-leadership, has enabled Cuyahoga County to develop a plan for a sustainable transportation system for seniors and convene a coalition of cross-sector stakeholders out of which the model for STC grew. Mt. Sinai successfully moved the issue of senior transportation to the top of the community’s agenda, and the Foundation has now helped to raise the issue in civic dialogue.

For the first time in STC’s fifteen years of existence, Cuyahoga County’s 2020-2021 biennial budget includes major support for STC, totaling $400,000 over the biennium ($200,000 per year). The appropriation occurred in large part due to the leadership of County Executive Armond Budish, County Council Budget Chair Dale Miller, and County Council Human Services Chair Yvonne Conwell. Foundation President Mitchell Balk engaged these elected officials on behalf of this longstanding grantee-partner, and Mt. Sinai support of STC figured prominently in the discussion that ultimately culminated in this appropriation.

This public sector support of Senior Transportation Connection marks a proud moment for Cuyahoga County and our region’s seniors.
THE MT. SINAI LEGACY IN ACADEMIC MEDICINE/BIOSCIENCE

CLEVELAND WELCOMES THE FIRST MT. SINAI SCHOLAR IN TRANSFORMATIVE NANOMEDICINE:
A PARTNERSHIP BETWEEN THE CLEVELAND CLINIC AND THE HEBREW UNIVERSITY OF JERUSALEM

The Mt. Sinai Scholars Program in Transformative Nanomedicine program enables local academic medicine institutions to build a biomedical bridge between Cleveland and Israel. Leslie Rebibo, PhD, of the Hebrew University of Jerusalem, is the first Mt. Sinai Scholar, and the fellowship has enabled her to learn innovative techniques that will help her perform research on improving the efficacy of drug therapy uptake in eye care, specifically inflammatory disease. Through nano-particle drug delivery, drugs are targeted towards a particular part of the body, rather than going everywhere, to minimize harmful side effects.

MT. SINAI, CASE SCHOOL OF DENTAL MEDICINE LAUNCH MT. SINAI-DR. EDWARD REITER FELLOWSHIP IN CRANIOFACIAL ABNORMALITIES AND ANOMALIES

The new Case Western Reserve University (CWRU) Health Education Campus, supported by a catalytic grant from the Foundation, features a multidisciplinary craniofacial orthodontic clinic. This clinic is one only of a few across the United States and serves 500 patients in Northeast Ohio. The Mt. Sinai-Dr. Edward Reiter Fellowship in Craniofacial Abnormalities and Anomalies plays a key role in recruiting talented young doctors to this clinic and is the first such training program in the country. In 2019, Rany Bous, BDS, MSD, and Rahma ElNaghy, BDS, MOrthRCS were the first doctors to train in the Mt. Sinai-Reiter Fellowship. Through the fellowship, Drs. Bous and ElNaghy had opportunities to treat diverse patients, train with craniofacial specialists, mentor dental students, teach, and conduct research. Both doctors plan to continue their work with CWRU as faculty in some capacity, in addition to their clinical practices and research. The two Fellows met with the Foundation’s Board of Directors at its September 9, 2019 quarterly Board Meeting.

TECHNION-UNIVERSITY HOSPITALS EDUCATIONAL AFFILIATION

The Mt. Sinai Foundation recently helped launch a new educational affiliation between University Hospitals of Cleveland (UH) and Technion-Israel Institute of Technology. Technion senior medical students can now do elective rotations at UH and receive educational credit. Technion medical student Daniel Freedman spent most of his time in Cleveland at the new UH Rainbow Babies & Children’s Outpatient Center on Euclid Avenue. He plans to apply to family medicine residency programs in the spring.

Technion medical student Daniel Freedman with Mt. Sinai President Mitchell Balk outside University Hospitals Cleveland Medical Center.

The Technion-Israel Institute of Technology is a public research university in Haifa, Israel. Established in 1912 during the Ottoman Empire and more than 35 years before the State of Israel, the Technion is the oldest university in the country. The Technion is ranked the best university in Israel and the Middle East.
LEAD SAFE CLEVELAND COALITION MARKS ONE-YEAR ANNIVERSARY

COALITION CELEBRATES LEGISLATION, CREATION OF LEAD SAFE HOME FUND

On January 22, 2019, Mt. Sinai Health Care Foundation President Mitchell Balk announced the establishment of the Lead Safe Cleveland Coalition at a press conference at Cleveland City Hall (see video on the Mt. Sinai home page at www.mtsinaifoundation.org). More than 400 members, 120 cross-sector organizations, and families affected by lead poisoning have come together in an unprecedented systems-change collaborative with city, county, and state government. In just one year, the Coalition successfully executed its 2019 action plan to create community goals, develop lead safe public policy, host the Lead Safe Home Summit, and launch the Lead Safe Home Fund.

Passage of the Lead Safe Ordinance by Cleveland City Council on July 24, 2019 stemmed from the Coalition’s multi-faceted work and marked a major milestone in Cleveland’s efforts to prevent lead poisoning. The Lead Safe Certificate system, the Coalition’s centerpiece, requires rental units built before 1978 be inspected and certified as lead safe beginning in March 2021. This policy and systems change will safeguard children’s health while simultaneously presenting an opportunity to improve Cleveland’s housing stock. According to Balk, “The Lead Safe Cleveland Steering Committee stands ready to help implement this legislation to make this ordinance work for both Cleveland’s families and landlords. This will be no small task, but we are all in.”

Following passage of the lead safe legislation, the Coalition announced the creation of the Lead Safe Home Fund, a first-of-its-kind nationally, public-private investment tool that will provide low-income families and property owners the resources they need to make homes lead safe. Comprised of the Lead Safe Resource Center and Home Loans and Grants, the Fund will provide property owners and families support for home repair and lead poisoning prevention. The Lead Safe Resource Center will serve as the front door to the Lead Safe Home Fund. It will be a one-stop-shop where residents, landlords, lead safe workers, and others can learn about lead hazards, receive support, and access resources to make homes lead safe. Home Loans and Grants will help property owners access capital in order to achieve the City of Cleveland’s new Lead Safe Certification.

After a public Request for Qualifications and thorough review process, the Lead Safe Cleveland Steering Committee unanimously selected Environmental Health Watch (EHW) to serve as the Resource Center Administrator and CHN Housing Partners (CHN) to serve as the Home Loans and Grants Administrator. As the Lead Safe Resource Center Administrator, EHW will manage the operational headquarters for lead poisoning prevention public awareness, workforce development, landlord and resident outreach, and more. CHN, as the Home Loans and Grants Administrator, will help create, manage, and operate a substantial, sustainable fund with a variety of financial products sourced from different sectors to support property owner compliance with the Lead Safe Certificate system. The Coalition hopes to preliminarily launch the Resource Center and Home Loans and Grants in the summer of 2020.

The Coalition has been working for months to structure and capitalize a transparent and flexible Lead Safe Home Fund—managed outside of government—that supports effective, enforceable, and equitable solutions for property owners and families. Based on research, data collection, and modeling, the Coalition has developed a five-year, $99.4 million Lead Safe Home Fund budget. Since launching the Fund in September 2019, the Coalition has already raised over $13 million in commitments. In addition to an initial $2 million seed investment from the State of Ohio, the Fund has secured $5 million from the City of Cleveland to support initial implementation, as well as $6.1 million in philanthropic contributions from the George Gund Foundation, the Mt. Sinai Health Care Foundation, the Saint Luke’s Foundation, and Huntington Bank. Other targeted investment sources include local and federal government, community development financial institutions, organized philanthropy, corporations, anchor institutions, banks and more.

As the Coalition turns to its 2020 Action Plan, it seeks to support the City of Cleveland to build and roll out the Lead Safe Certificate system, launch a public awareness campaign, continue to advocate for state and federal lead safe policies and resources, secure additional investments in the Lead Safe Home Fund, and launch the Lead Safe Resource Center and Home Loans and Grants, including lead safe workforce development and landlord outreach. The project is fulfilling many of the promises of Mt. Sinai philanthropy, according to Balk. “We are doing something at scale, that will last, for the benefit of Cleveland’s children today, and for generations of Clevelanders yet unborn.”
Officials from the U.S. Department of Housing and Urban Development (HUD) present Cleveland Mayor Frank G. Jackson a check for $9.7 million, one of only seven HUD “High Impact” lead poisoning prevention awards in the nation. The Lead Safe Cleveland Coalition figured prominently in the City’s application.
A stable home is the bedrock of family life and child development and is especially critical to young children. However, healthy and affordable homes are often elusive for low-income families, and that puts children at risk of exposure to lead-based paint and other hazards. Lead poisoning alone can damage a child’s developing brain and cause lifelong, irreversible damage that affects learning, behavior, and health.

Older, post-industrial cities such as Cleveland, Ohio, and Buffalo, New York, have found that the vast majority of childhood lead poisoning occurs in rental units—often one- and two-unit properties—that are owned by thousands of small-time landlords. These landlords are key partners in protecting children from lead hazards and therefore play a pivotal role in shaping the future of our country’s cities and towns.

Recognizing this, leaders in Cleveland and Buffalo have built strong public-private partnerships to deploy new tools that assist landlords with making improvements to their properties. These improvements are necessary to ensuring low-income families’ access to healthy and affordable rental housing.

One driving force behind improving housing conditions is the installation of proactive rental inspection systems. Such systems typically require rental units to be assessed for and remediated of lead hazards before they can be rented. Renting units that are not certified as lead safe can have financial consequences for landlords, anywhere from a ticket to major penalties, plus the cost of remediation.

The Lead Safe Cleveland Coalition—a broad, cross-sector public-private partnership with more than 370 active members representing housing, health care, community development, policy, government, philanthropy, research institutions, neighborhoods, and more—launched in January 2019 with the goal of eliminating childhood lead poisoning in Cleveland within 10 years. Among the initial supporters were seven foundations. The coalition’s first step was to assist the city of Cleveland in adopting groundbreaking policy to require that rental units built before 1978 be certified as lead safe. A lead ordinance, based largely on 33 policy recommendations submitted by the coalition, passed on July 24, 2019 and is set for enforcement beginning March 2021.

The Buffalo and Erie County Lead Safe Task Force is another strong cross-sector initiative and is convened by the Community Foundation for Greater Buffalo. The task force was created to implement the data-driven recommendations of a comprehensive study on lead. As a result, the city of Buffalo is launching a pilot inspection program for rental properties with current code violations. (Several foundations—including the Community Foundation for Greater Buffalo, Health Foundation for Western and Central New York, Peter and Elizabeth C. Tower Foundation, Ralph C. Wilson Jr., Foundation, and John R. Oishei Foundation—and others supported an initial study.)

The Robert Wood Johnson Foundation is providing funding and technical assistance for efforts in both Cleveland and Buffalo.

Housing code enforcement is an important tool, but it’s a blunt instrument that should not stand alone. Instead, resources and incentives for landlords must be in place for remediation to be timely and feasible. These supports encourage landlords to take proactive steps to make their properties lead safe, rather than waiting for enforcement after children have already been poisoned.

Contrary to popular belief, landlords in Cleveland and Buffalo typically are not absentee property owners or corporations aiming to turn a profit. Most of them live in the same or similar neighborhoods as their properties are located, or in the same metro area. In fact, rental properties in low-value housing markets frequently are not landlords’ primary sources of income but rather a way to supplement their own low-to-moderate incomes.
In September 2019, Cleveland announced the launch of a Lead Safe Home Fund, with leadership from the George Gund Foundation, Mt. Sinai Health Care Foundation, and Enterprise Community Partners, with an ambitious goal of raising $99.4 million over five years. The fund is a first-of-its-kind, public–private investment tool comprised of a Lead Safe Resource Center and a suite of Home Loans and Grants. The coalition views both components, in combination, as necessary to drive compliance with the city’s newly instituted proactive rental inspection mandate.

Cleveland’s Lead Safe Resource Center is envisioned as a one-stop shop, coordinating services and public education to serve families, property owners, and the broader community on all things related to lead poisoning prevention. The center will also serve as a central hub for workforce development to ensure that Cleveland’s landlords have access to highly qualified contractors, lead risk assessors, clearance technicians, and other lead safety professionals.

At the same time, Lead Safe Home Loans and Grants will offer landlords access to new financial products to help make complying with the proactive, lead safe certification system more feasible and streamlined. The goal is to make available low- or no-cost loans to eligible landlords with varying levels of need. Grants will also be available as an incentive for compliance with preventative measures. The fund will source investments from all sectors, including corporations, banking and financial institutions, philanthropy, health systems, the public sector, and more.

Meanwhile, the Community Foundation for Greater Buffalo has been using human-centered design to engage landlords in solving the lead problem. More than 40 landlords currently provide advice on education efforts for other landlords about lead hazards and connect them to appropriate resources. Typical Buffalo landlords own one to three properties, and many don’t have significant resources at the ready. Efforts are under way to create a new fund and central clearinghouse where landlords can access loans and grants to remediate lead hazards.

Tenants are also a focus in both Cleveland and Buffalo. Evictions have presented significant problems, especially related to poor housing conditions. For example, a tenant may call an inspector who comes and cites the property—then the landlord gets angry and evicts the tenant. It’s not legal, but it happens. Or there might be a problem in a residence that the landlord doesn’t fix for an extended period. The tenant believes that he or she can then withhold rent because of that. Technically, the tenant cannot, and the landlord can evict the tenant for nonpayment.

New York State just passed important new tenant protections under the Housing Stability and Tenant Protection Act. Alongside the new lead safe certificate policy, Cleveland also adopted an updated set of lead status disclosure mandates and in October 2019 passed additional policies affording a legal right to civil counsel in eviction cases involving low-income tenants citywide. All such policy change requires broad education of landlords and tenants on their rights and responsibilities, as well as their role in protecting children from lead exposure.

Role of Philanthropy

While organized philanthropy in places like Cleveland and Buffalo is helping move the needle on lead poisoning prevention, place-based funders are not the only ones acting with a sense of urgency and purpose. National philanthropy is also leading this work through the Lead Funders Action Network (LFAN), part of the Health and Environmental Funders Network. Co-chaired by the JPB Foundation and the Joyce Foundation, this group has supported research from Next Street and the Green & Healthy Homes Initiative on the financial tools available for lead remediation across the country. With help from the New York Community Trust, LFAN also has provided support to Earthjustice to produce a report on the legal mechanisms available to states and municipalities to reduce lead poisoning.

Organized philanthropy is needed now more than ever to spur and support progress on lead poisoning prevention. But if experiences from Cleveland and Buffalo tell us anything, it’s that no sector can take on this issue alone. If health advocates want to make serious advancements in protecting children from the lifelong impacts of lead poisoning, they must garner both public- and private-sector buy-in and develop solutions that work for everyone, including landlords. Efforts to increase inspections and enforcement must be accompanied by resources for property owners that are backed by philanthropy, financial institutions, and government.

Lead poisoning affects everyone, and we all must take responsibility for addressing it together.

### IMPACT OF YOUR INVESTMENT

No one thrives when Cleveland’s children cannot reach their potential.

**No one thrives if businesses are ready to leave or are reluctant to come to Cleveland because our housing stock is unhealthy and growing worse.**

Creating lead safe homes is effective AND cost efficient. After Rochester NY implemented a similar lead safe certificate system and encouraged the use of interior controls, lead poisoning rates decreased by nearly 85% within 10 years.

Lead poisoning prevention promises benefits that far exceed its cost. Much of this return-on-investment results from the avoidance of the long-term consequences of lead poisoning over the course of childhood, adolescent development, and adulthood. For children born this year alone, lead exposure will cost Ohio nearly $3 billion in reduced productivity, premature mortality, added healthcare, education, criminal justice, and social assistance costs.

#### INVESTMENT OPPORTUNITIES

The Fund will operate through two preliminary phases: the Pilot Period and the Full Compliance Cycle. The Pilot Period spans approximately three and a half years and encompasses the ramp-up toward the Lead Safe Certificate requirement and its first implementation cycle. The Full Compliance Cycle is the subsequent two-year period of system maturation.

### FOUNDATION NEWS

In September 2019, Cleveland announced the launch of a Lead Safe Home Fund, with leadership from the George Gund Foundation, Mt. Sinai Health Care Foundation, and Enterprise Community Partners, with an ambitious goal of raising $99.4 million over five years. The fund is a first-of-its-kind, public–private investment tool comprised of a Lead Safe Resource Center and a suite of Home Loans and Grants. The coalition views both components, in combination, as necessary to drive compliance with the city’s newly instituted proactive rental inspection mandate.

Cleveland’s Lead Safe Resource Center is envisioned as a one-stop shop, coordinating services and public education to serve families, property owners, and the broader community on all things related to lead poisoning prevention. The center will also serve as a central hub for workforce development to ensure that Cleveland’s landlords have access to highly qualified contractors, lead risk assessors, clearance technicians, and other lead safety professionals.

At the same time, Lead Safe Home Loans and Grants will offer landlords access to new financial products to help make complying with the proactive, lead safe certification system more feasible and streamlined. The goal is to make available low- or no-cost loans to eligible landlords with varying levels of need. Grants will also be available as an incentive for compliance with preventative measures. The fund will source investments from all sectors, including corporations, banking and financial institutions, philanthropy, health systems, the public sector, and more.

Meanwhile, the Community Foundation for Greater Buffalo has been using human-centered design to engage landlords in solving the lead problem. More than 40 landlords currently provide advice on education efforts for other landlords about lead hazards and connect them to appropriate resources. Typical Buffalo landlords own one to three properties, and many don’t have significant resources at the ready. Efforts are under way to create a new fund and central clearinghouse where landlords can access loans and grants to remediate lead hazards.

Tenants are also a focus in both Cleveland and Buffalo. Evictions have presented significant problems, especially related to poor housing conditions. For example, a tenant may call an inspector who comes and cites the property—then the landlord gets angry and evicts the tenant. It’s not legal, but it happens. Or there might be a problem in a residence that the landlord doesn’t fix for an extended period. The tenant believes that he or she can then withhold rent because of that. Technically, the tenant cannot, and the landlord can evict the tenant for nonpayment.

New York State just passed important new tenant protections under the Housing Stability and Tenant Protection Act. Alongside the new lead safe certificate policy, Cleveland also adopted an updated set of lead status disclosure mandates and in October 2019 passed additional policies affording a legal right to civil counsel in eviction cases involving low-income tenants citywide. All such policy change requires broad education of landlords and tenants on their rights and responsibilities, as well as their role in protecting children from lead exposure.

Role of Philanthropy

While organized philanthropy in places like Cleveland and Buffalo is helping move the needle on lead poisoning prevention, place-based funders are not the only ones acting with a sense of urgency and purpose. National philanthropy is also leading this work through the Lead Funders Action Network (LFAN), part of the Health and Environmental Funders Network. Formed as a result of the 1996 sale of Cleveland’s Mt. Sinai Medical Center and related hospitals, The Mt. Sinai Health Care Foundation assists Greater Cleveland’s organizations and leaders improve the health and well-being of the Jewish and general communities now and for generations to come. At December 31, 2019, the Foundation’s assets exceeded $155 million.

www.mtsinaifoundation.org
The Mt. Sinai Health Care Foundation expresses its sincere appreciation to its friends and supporters for their many generous contributions. In addition to honoring or remembering loved ones, gifts to the various funds help to improve the health status of the Greater Cleveland community through the Foundation’s grantmaking.
